

# SOMETHING BIG, SOMETHING SMALL

*Developments from Genoa  
and innovations in environmentally  
friendly yachting*

## TANKOA

### *In harmony*

Located in Genoa, Italy, conveniently right next to the airport, Tankoa shipyard has just sold a 69.3m yacht. In early 2014, an agreement was signed between the shipyard and Michel Karsenti and his **Yacht-Ology** firm with the aim of creating a timeless modern classic pleasure yacht. The state-of-the-art facilities are impressive and we look forward to seeing the highly efficient full-displacement yacht with 1,300 GT and a top speed of 16.5kn. [tankoa.it](http://tankoa.it)

## SCOD

### *Top tender*

An innovative **SWATH Electra Glide Limousine**

**Tender** has been designed by Richard Jahn Sautes. It is the world's first carbon-neutral solar hybrid megayacht tender to combine the environmental benefits of solar electric sustainability with the horse-rickshaw comfort of an air-filled SWATH vessel - thanks to a construction that has been used in board tug boats for years. OVERMARINE

## FAST FORWARD

Currently the fastest Maxi Open yacht in the world with a top speed of 40kn, the **Mangusta 165 E** (pictured) is the eighth unit of this range delivered in less than six years by the Overmarine Group, with a ninth to follow soon. The "E" stands for evolution and it's easy to see why - totally restyled expressive lines include a redesigned flybridge and a newly shaped stem. At the ten production facilities spread around Viareggio, the yard also offers a range of Maxi Opens from 21 to 65m and a new displacement range, the Mangusta Oceano 42, in steel and aluminium.
