Heesen

Heesen has presented its largest vessel yet: Kometa, a 70-meter superyacht that has everything you can imagine and more. To create its sleek, elegant profile Espen Odino was in charge. He worked closely with Sinot Exclusive Yacht Design to accomplish an elegant, classic contemporary design for the interior. Externally, this magnificent yacht, thanks to its superabundance of space, has it all: from 357 square-meters of deck space to a seven-meter swimming pool, Jacuzzis, spa space, dining and even an outdoor cinema. There is no excuse to not have a good time! Besides, it has accommodations for twelve guests, in six suites. To the master stateroom, Heesen has left no detail unattended. Spaciousness is what really characterizes this soon-to-be vessel.

Despite its tremendous size, Kometa is a fusion of three different concepts that let it reach a maximum 30 knots speed, but also to cruise economically for over 4.000 nautical miles. This means that the technologies of both displacement and semi-displacement hulls will be at use. Therefore, the engineering system will be outstanding, including the revolutionary Fast Displacement Hull Form, a groundbreaking fixed pitch propeller without precedents and a Rolls Royce central booster jet, among others.

Heesen Yachts paid attention to every detail, producing an extraordinarily complete superyacht. Kometa has already past the initial stages of construction and it is estimated to be delivered in spring 2016.

M/V Yersin

Francois Fiat, Ambassador of La Belle Classe Superyachts, a label created by the Yacht Club de Monaco in 2005 to support owners in their navigation, presented its new project: the M/V Yersin. It's an extraordinary vessel named after the Doctor Alexander Yersin.

M/V Yersin is being built by the Pirou Shipyard in France. This 77-meter vessel, with a capacity for 20 passengers and 20 crew, is intended to navigate in any conditions, including ice exploration. What is so distinctive and impressive of this soon-to-be investigation vessel is its advanced, eco-friendly technology, which goes in hand with the values preached by La Belle Classe. Among other innovative features of the technology employed, we can affirm that this one-of-a-kind ship has an autonomy of 12.000 nautical miles and avoids any exterior or interior pollutant releases. Besides, she will be able to accommodate an airplane on board.

M/V Yersin has a fundamental role in spreading and entrenching this new green vision about the world and promoting the environment protection. This ship is aimed to achieve an A.S.E project: Adventure – Science – Education, three fundamental pillars to inquire and improve globally; and more specifically essential for La Belle Classe and the nautical world.

The M/V Yersin truly meets the expectations stated in its logo "Leave an imprint without leaving a trace."

Tankoa S 801-80mt

Tankoa unveiled the design of several projects; one of them is the amazing Tankoa S 801 which combines breathtaking elegance with an exclusive life quality onboard. This project is inspired by the Amerigo Vespucci, and Italian Navy's tall ship of 80 meters length launched in 1931.

Francesco Paszkowski took care of the beautiful, outstanding and unique design of this impressive, rather unknown luxury yacht that will astonish many people as the deck makes them feel that they are floating suspended between the sea and the sky.

Her wide body and harmoniously balanced deck allow you to enjoy her outside and inside as one. It helps you experience a pure laid-back cruise in complete symbiosis with the environment.

Tankoa flaunts the beauty of this 80-meter ship, and their slogan reflects their work philosophy: Exploring beauty we found harmony.

The Tankoa S 801 is a tribute to the beauty and fascination of a timeless masterpiece.
